StaffAPI - Logging Out

Created by Unknown User (ryan.lederman), last modified by Unknown User (akashdeep.sethi) on 09/05/14

- Client request
    - POST arguments
- Server response

Client request

> (i) To log out (close a staff api session), perform an HTTP POST request to the following URL:
>
> `staffapi/index.php?/Core/Default/Logout`

POST arguments

Argument name	Value
sessionid	The unique session identifier sent in the log in response from the server

Server response

It is not necessary for the client application to examine the response from the server for this operation due to the fact that if an error occurs or the session has timed out, the client is not performing any further operations and should not care.

If an error **does** occur, the client's session will naturally expire after a period of time.
